

Genève Cornavin, expansion of the station.

Increasing the capacity of the Genève Cornavin rail hub.

In addition to the capacity increase of the Geneva rail hub, which will include the construction of a platform and two additional tracks underground, SBB Real Estate is adapting its commercial offer for passengers (services and shops) at the same time. In parallel with the rail infrastructure project, which will also include the creation of a large central passage and the redevelopment of the side passages, the City of Geneva is planning to redevelop the entire hub around Cornavin station. This will specifically encompass public spaces, links to adjacent districts, the greening of public space, traffic and parking. This project will create an urban hub that will facilitate intermodality in the city of Geneva and better harmonise the areas of the district north and south of the station. The commercial areas are expected to be completed by the end of 2035.

Plot area		Deadlines	
8 090 m²		Start of construction	2027
		Construction ends	2035
Investment volume		Project phase	
CHF 58 700 000.-		Construction project
